

## SOMETHING IN THE AIR!

School has started again, kids get sick, so do four legged kids! With outbreaks of upper respiratory issues such as canine cough (Bordetella) and an intense allergy season, East Tennessee has been a hot spot for pet-related health issues this summer. We, at Ms. C's Bed & Biscuits, are dedicated to the health & safety of our canine guests, so we have installed "PetAirapy", an air sanitizing system. We chose "PetAirapy" specifically because the company specializes exclusively in animal health. The system uses a proprietary sizing method which kills airborne and surface pathogens, We are proud to be the first pet care facility in the area to take this important extra step, aiding us in providing a healthy environment while your four legged kids are being boarded, attending daycare or being groomed.

PetAirapy is an air purification system that cleans and sanitizes the air to help eliminate airborne pathogens that can cause diseases. It also helps eliminate irritating allergens. PetAirapy works with the power of ultraviolet germicidal irradiation (UVGI aka UV-C). This type of UV is completely safe and has been used in human healthcare environments for close to 100 years to help prevent the spread of disease.

Cleaning the air is somewhat like cooling/heating the air. Simply put, air conditioners work by cooling air as it passes through them, hot air goes in, cold air comes out. You can clean the air by sanitizing it as it passes through something that will kill the bacteria and viruses. That something is the right amount of UVGI. "Over the counter" UV lamps don't have the power, but PetAirapy's, made in America UVGI system does.

Pets are our kids, and now we are proud to say "Due to PetAirapy, our canine guest breathe clean, purified air." Give us a call, we'd love to tell you more about our services.
